

What is claimed is:

1. A method for realizing a burning candle on the Internet space, comprising the steps of:

a) transmitting a web page to a user so that the user can select the kind and pattern of a candle and input data including the opening and closing dates of the candle;

b) generating a database based on the user's input data;

c) extracting a candle corresponding to the database and transmitting the candle to the user;

d) lighting the candle;

e) burning down the candle as time elapses; and

f) extinguishing the candle.

2. The method according to claim 1, wherein the step d) is automatically performed by a server or is performed by the user's clicking on a lighting button.

3. The method according to claim 1, wherein the step e) is performed in real-time.

4. The method according to claim 1, further comprising the step of extending the closing date by a payment of the additional fee.
